APE Labs Event Lighting Products

The unique wireless and portable lighting pieces are the specialisation and core focus of the Ape Labs brand. The founders wanted to design a professional grade lighting system which would be accessible to everyone; from home entertainment users and hobby DJs to multi-use event spaces and professional DJs and bands and filming spaces. The core product range is available to buy as individual pieces to suit any size of lighting set-up and requirement in addition to being available as bulk orders with or without tourcases for larger installations or travelling set-ups.

Each light (or set of lights) comes with the fully functional Ape Labs remote which controls grouping of lights, brightness, colour and colour transitions and the sound-to-light program. Only one remote is needed to control as many lights as you need in up to four independent groups within 1000ft range.

Lights can also be controlled using a Wireless DMX Console available separately from Ape Labs, this enables the user to create personalised and complex lighting programs.

All products come with lifetime technical support provided in the UK by LSA Lighting, we can assist with all aspects of set-up and installation by phone, email or at our office in Essex. All orders are tested prior to 24 hour courier dispatch to ensure your lights are ready to go as soon as they arrive and have been fully charged by you!

Ape Labs also produce a range of fixed installation architectural event lighting that works using the same group system as the battery operated lighting.
